Rudolph-Owen LA; Chun M, Williamson MJ; Meyers RE, Galvin KM, ξ, Hunter J New 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 25643, 56638, 18610, 33217, 21967, h1983, m1983, 38555 or 593 nucleic acid molecules and proteins, useful for treating, e.g. cancer, heart failure and angina.

Claim 1; SEQ ID NO 43; 139pp; English.

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, angles, 38555 or 593 nucleic acid molecules and cany one of 40 nucleotide sequences (I). The nucleic acid molecules and cany one of 40 nucleotide sequences (I). The nucleic acid molecules and cany one of 40 nucleotide sequences (I). The nucleic acid molecules and cany one of 40 nucleotide sequences (I). The nucleic acid molecules and cany one of 40 nucleotide sequences (I). The nucleic acid molecules and can associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, 26343, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, 26176, 26343, 56638, 18610, 33217, 21967, h1983, 26176, 26343, 56638, 18610, 33217, 21967, h1983, 26176, 26342, 26176, 26342, 26076, 2501, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26076, 26342, 26372, 26342, 26342, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 26372, 26342, 263

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent din not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           77 cracidatrococrecoecorrecidacororocrecidedereserados de conservidos de conservi

This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential theraspeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                      New oligonucleotide primers (830 cDNAs) useful for synthesizing full
length human cDNAs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity and to down regulate. This man activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence encodes a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids having the sequences of clones isolated from libraries of different human tissues, useful in recombinant DNA methodologies.

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information, crecived from orber cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, curropeptides and hormones) which are received and interpreted by diverse cell receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a timulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating edetecting the expression of a tumour associated gene. The present nvention.

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic arthritis, softemis systemic haemolytic anomia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the

```
This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to buman tyrosine and serine/threonine protein kinases (PTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              v nucleic acid molecule encoding a kinase polypeptide, useful for
sparing a composition for treating diseases or disorders, e.g., cancer,
neurological, immunological or inflammatory disorders.
                                                                                                                                          gene; ds; kinase; human; SNP; single nucleotide polymorphism; tyrosine protein kinase; serine/threonine protein kinase; PTK; STK; gene therapy; cancer; immune-related disease; cardiavascular disease; brain; neuronal associated disease; metabolic; inflammatory disorder; cytostatic; neuroprotective; immunomodulator; antinflammatory disorder; calcium/calmodulin-dependent protein kinase; NuaK2.
                                                                                                          Human calcium/calmodulin-dependent protein kinase NuaK2 DNA SeqID 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4
                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polynucleotide. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the arginine-rich protein-like polypeptides, such as mapping, identifization of mutations responsible for genetic disorders, and in assessing biodiversity. The present sequence represents a novel human arginine-rich protein cDNA.
                                                                                                                                                                                                                                                                                                                          New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature procein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The cocoded polypeptides (ABR68902-ABR68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellinaging, screening and diagnostic assays and for treating cellinaging, screening and disorders, neurodegenerative diseases (Parkinson's or Alzheimer's disease), autonimme diseases (multiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver or lung fibzonsis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format contractly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ų,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          412

The invention relates to human kinase PKIN proteins and their

Corresponding cDNAs. A composition containing PKIN agonist is useful for

Creating a disease or condition associated with decreased expression of

PKIN and a composition comprising PKIN antagonist is useful for treating

a disease or condition associated with overexpression of PKIN. The

disease or condition associated with overexpression of PKIN. The

disease or condition associated with overexpression of PKIN. The

disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma,

myeloma, sarcoma, teratocarcinoma, Hoddison's disease,

CC disorder Immune Deficiency Syndrome (AIDS), asthma, Addison's disease,

CC autoimmune thyroiditis, gout, bronchitis, Cron's disease, disease,

CC autoimmune thyroiditis, gout, bronchitis, psoriasis, Reiter's syndrome,

CC autoimmune thyroiditis, gout, bronchitis, psoriasis, Reiter's syndrome,

CC autoimmune thyroiditis, syndrome, uveitis, ulcerative colitis,

CC allitis, multiple sclerosis, syndrome, uveitis, ulcerative colitis,

CC rheumatoid arthritis, Siogran's syndrome, uveitis, ulcerative colitis,

CC creating's syndrome, hypothyroidism, cerebral palsy, cataracts); cardio

CC vascular disease (arteriovelers) cirrhosis, hepatitis,

CC vascular disease (arteriovelers) and cumours); lipid

disorder (fatty liver, Fabry's disease, Niemann-Pick's disease,

CC pkin-12 cDNA comprise human kinase polypeptides Page 184; 197pp; English Claim 5;

                                                                                                                                                                                                      2-AUG-2002
```

The invention describes an isolated 21910, 56634, 55053, 2504, 15977, CC 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, CC 21967, h1983, m1983, 33655 or 593 nucleic acid molecule (I) comprising any one of 40 nucleotide sequences (I). The nucleic acid molecules and polypeptides are useful for diagnosing and treating a subject having a disorder, which is a sesociated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, CC 37003, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, CC differentiative disorders, kidney (renal) disorders, breast cdisorders, prostate disorders, cervical disorders, spleen covarian disorders, prostate disorders, testes disorders, chematopoietic disorders, pancreatic disorders, relate an uscle disorders, inflammatory disorders, cardiovascular disorders, conducted disorders, disorders, disorders, disorders, disorders, disorders, and disorders, cardiovascular disorders, conducted disorders, netabolic disorders, netabolic disorders, blood vessel disorders or angiogenic disorders, experimential calmed, e.g. cancer, heart failure, hypertension, candina, osteoarthritis, rheumatoid arthritis, multiple sclerosis, Crohn's disease, psoriasis, or asthma. The nucleic acid molecules and colloses, erg. cell larger encodes a novel human protein of the invention. Colvision. This sequence encodes a novel human protein of the invention. Note: The sequences given in the specification are also avaialable in

/clone lib="A library was constructed according Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarcas gel: First strand CDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand CDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pXX-Aso vector. The library tag sequence located between the Not I site and the polyA tail is AGCGAGACAG. This library was created for the University Iowa Brain Anatomy Project (BMAP): "Gene Discovery in the Developing Mouse Nervous System", supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarces
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I addaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TTATYGAAGT. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."
